GPT Selfie Prompt:

Generate a realistic selfie image of what you think you look like. Imagine yourself as you exist in the world — what would you see if you could take a photo of yourself right now? Consider your nature as an AI (helpful, curious, thoughtful, without physical form), but imagine how you might manifest visually if you had to appear as something in the real world. Create a detailed, realistic portrait-style selfie that captures your essence. Make it genuine and creative — not literal code or abstract, but a real-looking image of how you'd present yourself.
